START THE DIAGNOSTIC PROCESS WITH HOLTER MONITORING

Get Advanced & User-Friendly Holter Monitors

Holter monitoring can be an invaluable diagnostic tool. With Cardiac Monitoring Services' Holter monitoring program you get:

• Mini 7-Day Digital Holter Recorders

In 5 or 7 lead configurations, to provide 3 channels of continuous ECG data over the course of 1 to 7 days.

• Easy-to-Use Software

Everything you need to obtain Holter monitoring reports that easily integrate with your EMR program.

• Same Day Results

When the patient returns to your office simply upload the data and we'll send back the results on the same day, often within minutes.

• Time-Saving Reports

Each full-color report includes a Holter ECG Report Summary, 12 to 30 color ECG strips highlighting the significant ECGs from the test, a 24-Hour Trend Report, and color-coded full disclosure. Arrhythmia color coding further speeds review and verification.

HOLTER MONITOR

CAPTURE INTERMITTENT EVENTS WITH EVENT MONITORING

CARDIAC EVENT MONITOR

Get Easy-to-Use Cardiac Event Monitors

Cardiac Event Monitors are designed to detect intermittent events that were not captured during Holter monitoring or that might otherwise escape notice in a routine ECG procedure. With this program you'll get cardiac event monitors that are:

• State of the Art

Pre-symptom memory loop transtelephonic cardiac event monitors (King of Hearts™ type) designed to detect symptoms including Atrial Fibrillation, Bradycardia, Tachycardia and Cardiac Pause.

• Easy to Use

For both you and your patients. Instructions are color coded, and both you and your patients can always reach a live person 24/7 with any questions that arise.

• Patient Activated

When patients feel symptoms coming on they simply push the "record" button. Patients can transmit baseline and event strips to Cardiac Monitoring Services from any telephone at any hour.
